

Analysis of Arbitration Dynamics and its Impact over Legal Landscape

Anubhav Pathak

August 2023

1 Abstract

Arbitration has emerged as a prominent alternative dispute resolution mechanism, gaining widespread adoption due to its perceived efficiency, flexibility, and confidentiality. This project aims to conduct a comprehensive analysis of arbitration dynamics and their profound impact on the contemporary legal landscape. This study aims to comprehensively analyze a diverse range of arbitration cases in India, shedding light on various facets, trends, and challenges that have emerged over time.

Our study will be based on data collected from NJDG Dataset and records provided from Arbitration firms. Potential visualization will include trends in case duration, highlighting any patterns based on factors such as industry, jurisdiction. Possibility of revealing hotspots for arbitration activity. Sector-specific visualizations will analyze arbitration cases within specific industries that could show the most common types of disputes, prevailing arbitration rules, and average settlement amounts. Visualizations comparing arbitration and litigation outcomes, timelines, and costs. This could assist parties in making informed decisions about their preferred dispute resolution mechanism. Comparing trends of the pending cases from dataset with the increasing number of arbitration cases, can predict the success of arbitration dynamics in India.

Furthermore, this project endeavors to identify challenges that hinder the seamless progression of arbitration, such as issues related to procedural delays, arbitrator bias, and enforcement bottlenecks. Recommendations for potential reforms and improvements are also proposed based on the analysis, aimed at enhancing the overall efficiency and credibility of arbitration proceedings in India.

In conclusion, these data visualization have the potential to provide valuable insights into arbitration dynamics, enhance transparency, and aid parties, practitioners, and policymakers in making informed decisions about dispute resolution.
